

New, flexible and powerful self-service solutions work virtually anywhere

IBM AnyPlace Kiosk

IBM AnyPlace Kiosk 15", 17" and 19" performance models; 15" entry-level model now available

Highlights

- **All-new, flexible and powerful ultra-compact self-service solution delivers a compelling customer experience virtually anywhere**
- **Complete family of 15", 17" and 19" touch screen high-performance models with dual video display capability support advanced rich media applications**
- **New entry-level model available in 15" size for reliable performance to run essential applications**
- **IBM AnyPlace POS Hub™ delivers flexible point-of-sale capability with all AnyPlace Kiosk™ models**

At a time when shrinking margins call for ways to increase sales and reduce costs, the IBM AnyPlace Kiosk family of products can help businesses respond to this shift in consumer demand while maintaining a strong competitive edge.

Designed to optimize the consumer experience across a broad range of market segments, including retail, travel, financial, government, healthcare and entertainment, this family of AnyPlace Kiosks supports a global ecosystem of software applications.

IBM AnyPlace Kiosk features

The AnyPlace Kiosks are now available in both performance and entry-level models to offer more choice and flexibility to support a wide variety of applications.

In addition, hardware options such as mounts, floor-standing enclosures and custom faceplates from IBM Business Partners help tailor the system to your business needs and enhance brand perception.

Powerful features deliver compelling self-service

The ultra-compact AnyPlace Kiosk is designed to deliver compelling self-service virtually anyplace. Its performance units offer rich features including an integrated motion sensor, realistic 3-D graphics, high-quality audio and advanced infrared touch screen technology that delivers interactive services with an exciting and intuitive user experience. By placing kiosks at strategic locations, you can help influence consumer decisions and increase employee productivity without adding a single square foot of real estate.

AnyPlace Kiosk self-service solutions are easy to install and can be readily customized to fit almost any environment. The sleek flat-panel touch screen—now available in 15", 17" and 19" sizes for the performance units—incorporates high-performance Mobile AMD Sempron™ and AMD Turion™ dual-core processors that support leading-edge applications. AMD Turion is an advanced dual-core processor uniquely optimized for multitasking and rich media applications. The entry-level models incorporate the Via C7 processor for reliable performance. Dual video display capability delivers an outstanding customer experience for digital signage or second touch screen support, and a magnetic strip reader and scanner option fit seamlessly into this powerful yet low-profile device.

Flexible configurations help increase business agility

For additional flexibility in the performance units, five USB and two serial ports accommodate a wide variety of optional external peripherals. A single power cord, industry-standard VESA mounting plate and multiple mounting

options make the kiosk easy to place and cost-effective to move in busy, high-traffic environments.

The new entry-level model, available in a 15" size, offers essential performance capabilities for most off-the-shelf software and applications. With an open standards based platform, energy efficient VIA processor, and chipset choices, this unit is designed to reduce power consumption to run essential applications.

With this flexibility, both performance and entry level units are designed so you can quickly respond to changing customer needs and minimize the costs of exploring new trends.

Point-of-sale flexibility improves efficiency

The new AnyPlace POS Hub feature provides outstanding versatility in fast-paced retail locations. To extend POS (point of sale) capabilities, IBM offers this optional AnyPlace POS Hub that works with any of the AnyPlace Kiosk models. It has five Powered USB ports,

IBM AnyPlace Kiosk 19" with AMD processors

IBM AnyPlace Kiosk features

IR touchscreen display has no plastic film to scratch and is designed to help avoid the need for recalibration

Integrated stereo speakers for high-quality audio

Presence detector can activate kiosk as end users approach

Multiple mounting devices (optional) enable you to place kiosks at touchpoints convenient to customers and employees. These options (shown) include Tabletop Mounts with a wide tilt range for ergonomically correct viewing; third-party mounts such as the articulated radial arm and mounts to the wall.

a cash drawer port and a lengthy USB cable that connects to an AnyPlace Kiosk. Powered USB ports, built on IBM innovation and industry standards, allow staff to quickly attach high-speed peripherals without requiring multiple, bulky power supplies. Now you can locate POS capability wherever it is needed.

Since the power supply is fully integrated within the unit, the low-profile Hub weighs a light 6.0 lbs (2.72 kgs)

and can be mounted in a variety of positions—for instance, on a shelf, under a counter or on the wall. With only one platform required for kiosk or POS scenarios, the AnyPlace POS Hub is a cost-effective way to quickly adapt to changing customer trends and position your business for growth.

Leading wireless capability drives mobility

Mobility is a key feature of the IBM self-service solutions. The performance AnyPlace Kiosk units contain an ExpressCard™ slot to insert expansion cards like wireless WAN third-party options, which deliver business flexibility to connect and interact with consumers in a wide variety of environments. ExpressCard® is a new industry standard expansion slot that enables high-speed peripherals in a compact form factor.

IBM AnyPlace Kiosk features

1. Hard drive cover
2. 80 GB hard drive (7200 RPM) or optional 160 GB hard drive (7200 RPM) (5xx/7xx/9xx only)
3. 6 Threaded mounting points for customized facelates, signage or additional peripherals (ex. biometric reader)
4. VESA mounting plate easily attaches to a variety of compliant mounts (available with optional Wall Mount or TableTop Mount)
5. MSR (Magnetic Stripe Reader) (option)
6. Barcode scanner - Line or Omni (optional)
7. Cable cover
8. Two SO-DIMM memory slots
9. PS/2 Port (internal)
10. Optional 4 GB Modular Flash Drive (MFD)
11. Wireless LAN - 802.11 a/b/g/n draft* (option)
12. ExpressCard Slot
13. LightPath Management LEDs
14. AMD Sempron™ 1.8 GHz or AMD Turion™ 1.8 GHz Dual Core Processor
15. Integrated graphics technology delivers intense, 3D graphics with sharp images
16. VIA C7-D 2.0 GHz Processor
17. Side panel cover with Express Card slot cover
18. Side panel covers (3xx only)

- a. MSR port
- b. Four high-speed USB 2.0 ports
- c. External power supply minimizes kiosk size and simplifies service
- d. Microphone port
- e. Headphone port
- f. VGA port
- g. Barcode Scanner port
- h. Gigabit Ethernet (10/100/1000)
- i. Two RS232 ports
- j. Ethernet (10/100)

The AnyPlace Kiosk performance units also provide a secure network connection for rich media applications that can function independently from the immediate environment. For example, a retailer can quickly set up a “pop-up store,” a temporary station that could be set up in a mall, for example.

The pop-up store can attract new customers, extend brand reach and showcase new offerings without drawing on additional mall staff or IT resources.

Robust design protects your investment

Engineered for long life and continuous availability, AnyPlace Kiosks feature a rugged, durable exterior that has held up under rigorous testing, frequent use,

and rough handling in harsh public situations. AnyPlace Kiosks are deployed in thousands of busy public spaces and consistently perform well in high-traffic conditions. The sealed, spill-resistant display and self-service hardened design can be embedded in the most demanding environments for engaging, round-the-clock interaction.

IBM AnyPlace Kiosk features

The AnyPlace Kiosk also features important built-in measures to ensure secure access. The all-in-one design eliminates the need for most external peripherals, while protecting the expansion ports as well. An optional modular flash drive provides storage with no moving parts for high reliability. In addition, a robust bezel cover design provides secure cable management and tamper-resistant controls. By preventing unauthorized access, these security features help protect your data and your investment.

Advanced management tools streamline operations

System management of the AnyPlace Kiosk is simple and cost-effective. A powerful combination of the IBM Remote Management Agent (RMA), IBM Light-Path Management (available with performance models only) and environmental monitoring sensors help staff monitor and manage

systems from a central site. RMA is now integrated into an enhanced end-to-end systems management solution, empowering retailers to manage their store environments more competitively. Also part of this management solution is IBM Director, a systems management tool that retailers can use to centrally manage their systems to help them achieve greater system uptime for more throughput.

Important system updates can be performed remotely, and built-in alert systems facilitate predictive maintenance and rapid diagnosis. Streamlining system management helps lower total cost of ownership and improve system availability.

Easy serviceability

Servicing the AnyPlace Kiosk has never been easier. The virtually tool-free design allows fast access to other internal components. This helps minimize downtime and reduce service costs.

And if needed, the experienced IBM worldwide service and support network is always ready to help you protect your investment.

Environmentally friendly features save energy

IBM self-service systems are built to help companies expand and upgrade for a long life cycle, which can translate into companies disposing of fewer obsolete products. As part of IBM's commitment to developing products that reduce consumption of energy, IBM performance models use AMD mobile processors in the AnyPlace Kiosk. IBM entry level models use VIA processors with built-in power management that can help reduce system energy usage. The IBM worldwide packaging engineering team strives to use materials with recycled content and common shipping methods to help optimize the sustainability of packaging materials.
